A New York Times Bestseller Winner of the James Beard Award for General Cooking and the IACP Cookbook of the Year Award "The one book you must have, no matter what you're planning to cook or where your skill level falls."—New York Times Book Review Ever wondered how to pan-fry a steak with a charred crust and an interior that's perfectly medium-rare from edge to edge when you cut into it? How to make homemade mac 'n' cheese that is as satisfyingly gooey and velvety-smooth as the blue box stuff, but far tastier? How to roast a succulent, moist turkey (forget about brining!)—and use a foolproof method that works every time? As Serious Eats's culinary nerd-in-residence, J. Kenji López-Alt has pondered all these questions and more. In The Food Lab, Kenji focuses on the science behind beloved American dishes, delving into the interactions

between heat, energy, and molecules that create great food. Kenji shows that often, conventional methods don't work that well, and home cooks can achieve far better results using new—but simple—techniques. In hundreds of easy-to-make recipes with over 1,000 full-color images, you will find out how to make foolproof Hollandaise sauce in just two minutes, how to transform one simple tomato sauce into a half dozen dishes, how to make the crispiest, creamiest potato casserole ever conceived, and much more. The study of human anatomy and physiology really comes to life in the anatomy and physiology laboratory, where students get hands-on experience with human cadavers and bones, classroom models, preserved and fresh animal organs, histology slides of human tissues, and learn the process of scientific discovery through physiology experimentation. This lab manual is intended to provide students with tools to make the subject matter more relevant to their own bodies and to the world around them. It is an interactive workbook for students: a 'how-to' guide to learning human anatomy and physiology through touch, dissection, observation, experimentation, and critical thinking exercises. Chapter 28 is unique to this Fetal Pig Version of the Lab Manual and contains 16 exercises designed to walk students through dissection and identification of all systems and structures of the fetal pig, beginning with the skeletal system and progressing through all systems. Definitive guide to fetal pig anatomy. Most common animal dissection for education in medicine and the sciences. Illustrations by award-winning medical illustrator Vince Perez. ISBN "9780321822338" from label on back cover.
