Doctoring Aug 22 2021 American medicine attracts some of the brightest and most motivated people the country has to offer, and it boasts the most advanced medical technology in the world, a wondrous parade of machines and techniques such as PET scans, MRI, angioplasty, endoscopy, bypasses, organ transplants, and much more besides. And yet, writes Dr. Eric Cassell, what started out early in the century as the exciting conquest of disease, has evolved into an overly expensive, over technologized, uncaring medicine, poorly suited to the health care needs of a society marked by an aging population and a predominance of chronic diseases. In *Doctoring: The Nature of Primary Care Medicine*, Dr. Cassell shows convincingly how much better fitted advanced concepts of primary care medicine are to America's health care needs. He offers valuable insights into how primary care physicians can be better trained to meet the needs of their patients, both well and sick, and to keep these patients as the focus of their practice. Modern medical training arose at a time when medical science was in ascendancy, Cassell notes. Thus the ideals of science--objectivity, rationality--became the ideals of medicine, and disease--the target of most medical research--became the logical focus of medical practice. When clinicians treat a patient with pneumonia, they are apt to be

thinking about pneumonia in general--which is how they learn about the disease--rather than this person's pneumonia. This objective, rational approach has its value, but when it dominates a physician's approach to medicine, it can create problems. For instance, treating chronic disease--such as rheumatoid arthritis, diabetes, stroke, emphysema, and congestive heart failure--is not simply a matter of medical knowledge, for it demands a great deal of effort by the patients themselves: they have to keep their doctor appointments, take their medication, do their exercises, stop smoking. The patient thus has a profound effect on the course of the disease, and so for a physician to succeed, he or she must also be familiar with the patient's motivations, values, concerns, and relationship with the doctor. Many doctors eventually figure out how to put the patient at the center of their practice, but they should learn to do this at the training level, not haphazardly over time. To that end, the training of primary care physicians must recognize a distinction between doctoring itself and the medical science on which it is based, and should try to produce doctors who rely on both their scientific and subjective assessments of their patients' overall needs. There must be a return to careful observational and physical examination skills and finely tuned history taking and communication skills. Cassell also advocates the need to teach the behavior of both sick and well persons, evaluation of data from clinical epidemiology, decision making skills, and preventive medicine, as well as actively teaching how to make

technology the servant rather than the master, and offers practical tips for instruction both in the classroom and in practice. Most important, *Doctoring* argues convincingly that primary care medicine should become a central focus of America's health care system, not merely a cost-saving measure as envisioned by managed care organizations. Indeed, Cassell shows that the primary care physician can fulfill a unique role in the medical community, and a vital role in society in general. He shows that primary care medicine is not a retreat from scientific medicine, but the natural next step for medicine to take in the coming century.

Mayo Clinic Internal Medicine Board Review Apr 05 2020
Mayo Clinic Internal Medicine Board Review, 10th edition, is designed to meet the needs of physicians-in-training and practicing clinicians by updating their knowledge of internal medicine and preparing them for the ABIM certification and maintenance-of-certification examinations in internal medicine. For the 10th edition, contributors were asked to map chapters according to ABIM goals. At least 50 percent of the material will be new, with the remainder changed and updated. The redesign is intended to cover all ABIM goals while streamlining the text to make it more user-friendly. Large chapters have been broken up into smaller content-oriented chapters to facilitate shorter, more focused study opportunities. This book is divided into subspecialty topics (eg, allergy, cardiology, dermatology, etc) and cross-content topics related to general internal medicine (eg, men's health, women's health, geriatrics, etc). Questions and answers have been pulled from the main text to a companion book of Q&As to facilitate study.

Medicolegal Death Investigation System Nov 24 2021 The US Department of Justice's National Institute of Justice (NIJ) asked the Institute of Medicine (IOM) of The National Academies to conduct a workshop that would examine the interface of the medicolegal death investigation system and the criminal justice system. NIJ was particularly interested in a

workshop in which speakers would highlight not only the status and needs of the medicolegal death investigation system as currently administered by medical examiners and coroners but also its potential to meet emerging issues facing contemporary society in America. Additionally, the workshop was to highlight priority areas for a potential IOM study on this topic. To achieve those goals, IOM constituted the Committee for the Workshop on the Medicolegal Death Investigation System, which developed a workshop that focused on the role of the medical examiner and coroner death investigation system and its promise for improving both the criminal justice system and the public health and health care systems, and their ability to respond to terrorist threats and events. Six panels were formed to highlight different aspects of the medicolegal death investigation system, including ways to improve it and expand it beyond its traditional response and meet growing demands and challenges. This report summarizes the Workshop presentations and discussions that followed them.

Health Data in the Information Age Jan 15 2021 Regional health care databases are being established around the country with the goal of providing timely and useful information to

policymakers, physicians, and patients. But their emergence is raising important and sometimes controversial questions about the collection, quality, and appropriate use of health care data. Based on experience with databases now in operation and in development, *Health Data in the Information Age* provides a clear set of guidelines and principles for exploiting the potential benefits of aggregated health data—without jeopardizing confidentiality. A panel of experts identifies characteristics of emerging health database organizations (HDOs). The committee explores how HDOs can maintain the quality of their data, what policies and practices they should adopt, how they can prepare for linkages with computer-based patient records, and how diverse groups from researchers to health care administrators might use aggregated data. *Health Data in the Information Age* offers frank analysis and guidelines that will be invaluable to anyone interested in the operation of health care databases.

Post Mortem Examination and Autopsy Mar 05 2020

Forensic medicine explores the legal aspects of medicine, and medicolegal investigation of death is the most significant and crucial function of it. The nature of post mortem examinations are changing and the understanding of causes of death are evolving with the increase of knowledge, availability, and use of various analyses including genetic testing. Postmortem examination practice is turning into a more multidisciplinary approach for investigations, which are becoming more evidence based. Although there are numerous publications about forensic medicine and post mortem examination, this

book aims to provide some basic information on post mortem examination and current developments in some important and special areas. It is considered that this book will be useful for forensic pathologists, clinicians, attorneys, law enforcement officers, and medical students.

Feeling Medicine Apr 29 2022 The emotional and social components of teaching medical students to be good doctors The pelvic exam is considered a fundamental procedure for medical students to learn; it is also often the one of the first times where medical students are required to touch a real human being in a professional manner. In Feeling Medicine, Kelly Underman gives us a look inside these gynecological teaching programs, showing how they embody the tension between scientific thought and human emotion in medical education. Drawing on interviews with medical students,

faculty, and the people who use their own bodies to teach this exam, Underman offers the first in-depth examination of this essential, but seldom discussed, aspect of medical education. Through studying, teaching, and learning about the pelvic exam, she contrasts the technical and emotional dimensions of learning to be a physician. Ultimately, *Feeling Medicine* explores what it means to be a good doctor in the twenty-first century, particularly in an era of corporatized healthcare.

The Neurologic Examination Feb 25 2022 Whereas most book about the neurologic examination are disease and anatomy oriented, *The Neurologic Examination: Scientific Basis for Clinical Diagnosis* focuses on a pathophysiological approach to the nervous system. The authors emphasize that the scientific interpretation of symptoms obtained from carefully taking the patient's history and noting signs found during physical examination are essential in the diagnosis of neurologic diseases, even if laboratory testing, such as electrophysiology and neuroimaging, are more widely used. This book aims to provide a bridge from the basic sciences

such as anatomy, physiology, pharmacology, and molecular biology to the neurologic symptoms. Neurologic examinations provide the foundation for diagnosis, and only after a thorough and expertly executed examination can one begin to incorporate laboratory testing and treatment. The Neurologic Examination: Scientific Basis for Clinical Diagnosis, based on the widely successful Japanese book Diagnosis of Neurological Diseases (Igakushoin, Japan, second edition 2013) by Dr. Shibasaki, hopes to revitalize the use of neurologic examinations before jumping into laboratory testing. Doing so can help cut down on time, patient and physician anxiety, and unnecessary testing expenses. This book is a must-read for all practicing neurologists, residents, and medical students. Key Features Include · The chapters are arranged in order of the actual steps in a neurologic examination; · Highly illustrated with figures and tables indicative of the neurologic signs and symptoms that may appear during the given step; and · 99 discussion boxes are inserted throughout to provide a more in-depth look at particular topics without interrupting the reading flow of the text.

Playing by the Rules Dec 26 2021 This is a philosophical but non-technical analysis of the very idea of a rule. Although focused somewhat on the role of rules in the legal system, it is also relevant to the place of rules in morality, religion, etiquette, games, language, and family governance. In both explaining the idea of a rule and making the case for taking rules seriously, the book is a departure both in scope and in perspective from anything that now exists.

Physician-Assisted Death Sep 22 2021 Physician-Assisted Death is the eleventh volume of Biomedical Ethics Reviews.

We, the editors, are pleased with the response to the series over the years and, as a result, are happy to continue into a second decade with the same general purpose and zeal. As in the past, contributors to projected volumes have been asked to summarize the nature of the literature, the prevailing attitudes and arguments, and then to advance the discussion in some way by staking out and arguing forcefully for some basic position on the topic targeted for discussion. For the present volume on Physician-Assisted Death, we felt it wise to enlist the services of a guest editor, Dr. Gregg A. Kasting, a practicing physician with extensive clinical knowledge of the various problems and issues encountered in discussing physician assisted death. Dr. Kasting is also our student and just completing a graduate degree in philosophy with a specialty in biomedical ethics here at Georgia State University. Apart from a keen interest in the topic, Dr. Kasting has published good work in the area and has, in our opinion, done an excellent job in taking on the lion's share of editing this well-balanced and probing set of essays. We hope you will agree that this volume significantly advances the level of discussion on physician-assisted euthanasia. Incidentally, we wish to note that the essays in this volume were all finished and committed to press by January 1993.
