*OSHA Instruction* May 22 2022 OSHA's mission is to assure the safety and health of America's working men and women by promulgating and enforcing standards and regulations; providing training, outreach, and education; establishing partnerships; and encouraging continual improvement in workplace safety and health as well as the development of comprehensive safety and health management systems. Effective and efficient use of resources requires careful, flexible planning. In this way, the overall goal of hazard abatement and employee protection is best served. This Instruction establishes a Safety and Health Management System (SHMS) for Occupational Safety and Health Administration (OSHA) employees. The Instruction also establishes safety and health programs as identified in subsequent chapters for Regional implementation. Employee participation is a key element of any successful SHMS. It is the intent of this program that all employees will participate in all aspects including reporting hazards, incidents, and injury/illness without fear of reprisal. The purpose of this Instruction is to define and implement a Field Safety and Health Management System (SHMS) and appropriate safety and health programs, as identified in the subsequent chapters, for OSHA. OSHA is responsible for ensuring that employees of the Agency have a safe and healthful workplace that complies with the Occupational Safety and Health Act and with OSHA standards. Establishing an effective SHMS appropriate to employees' varied work responsibilities and workplace conditions is also an essential strategy to eliminate/control hazards before they lead to fatalities, injuries and illnesses.

**Workplace safety and health** Aug 21 2019 OSHA is generally responsible for setting and enforcing occupational safety and health standards in the nation's workplaces. OSHA carries out enforcement directly in 34 states and territories, while the remaining 22 have chosen to administer their own enforcement programs (state-run programs) under plans approved by OSHA. GAO was asked to review issues related to state-run programs. This report examines (1) what challenges states face in administering their safety and health programs, and (2) how OSHA responds to state-run programs with performance issues. GAO reviewed relevant federal laws, regulations and OSHA policies; conducted a survey of 22 state-run programs; and interviewed officials in OSHA's national office, all 10 OSHA regions, and from a nongeneralizable sample of 5 state-run programs; and interviewed labor and business associations and safety and health experts. State-run programs face several challenges that primarily relate to staffing, and include having constrained budgets, according to OSHA and state officials. States have difficulty filling vacant inspector positions, obtaining training for inspectors, and retaining qualified inspectors. Recruiting inspectors is difficult due to the shortage of qualified candidates, relatively low state salaries, and hiring freezes. Although OSHA has taken steps to make its courses more accessible to states, obtaining inspector training continues to be difficult. According to an agency official, OSHA's Training Institute faces several challenges in delivering training, including recruiting and retaining instructors, difficulty accommodating the demand for training, and limitations in taking some courses to the field due to the need for special equipment and facilities. These challenges are further exacerbated by states' lack of travel funds, which limit state inspectors' access to OSHA training. Retaining qualified inspectors is another challenge among states. Officials noted that, once state inspectors are trained, they often leave for higher paying positions in the private sector or federal government. GAO's survey of the 22 state-run programs that cover private and public sector workplaces showed that turnover was more prevalent among safety inspectors than health inspectors. Nearly half of these states reported that at least 40 percent of their safety inspectors had fewer than 5 years of service. In contrast, half of the states reported that at least 40 percent of their health

inspectors had more than 10 years of service. These staffing challenges have limited the capacity of some state-run programs to meet their inspection goals. OSHA has responded in a variety of ways to state-run programs with performance issues. These include closely monitoring and assisting such states, such as accompanying state staff during inspections and providing additional training on how to document inspections. OSHA has also drawn attention to poor state performance by communicating its concerns to the governor and other high-level state officials. In addition, OSHA has shared enforcement responsibilities with struggling states or, as a last resort, has resumed sole responsibility for federal enforcement when a state has voluntarily withdrawn its program. Although OSHA evaluates state-run programs during its annual reviews, GAO found that OSHA does not hold states accountable for addressing issues in a timely manner or establish time frames for when to resume federal enforcement when necessary. In addition, the current statutory framework may not permit OSHA to quickly resume concurrent enforcement authority with the state when a state is struggling with performance issues. As a result, a state's performance problems can continue for years. OSHA officials acknowledged the need for a mechanism that allows them to intervene more quickly in such circumstances. GAO-13-320

**Safe Work in the 21st Century** Jan 18 2022 Despite many advances, 20 American workers die each day as a result of occupational injuries. And occupational safety and health (OSH) is becoming even more complex as workers move away from the long-term, fixed-site, employer relationship. This book looks at worker safety in the changing workplace and the challenge of ensuring a supply of top-notch OSH professionals. Recommendations are addressed to federal and state agencies, OSH organizations, educational institutions, employers, unions, and other stakeholders. The committee reviews trends in workforce demographics, the nature of work in the information age, globalization of work, and the revolution in health care delivery—exploring the implications for OSH education and training in the decade ahead. The core professions of OSH (occupational safety, industrial hygiene, and occupational medicine and nursing) and key related roles (employee assistance professional, ergonomist, and occupational health psychologist) are profiled—how many people are in the field, where they work, and what they do. The book reviews in detail the education, training, and education grants available to OSH professionals from public and private sources.

**A Smarter National Surveillance System for Occupational Safety and Health in the 21st Century** Aug 13 2021 The workplace is where 156 million working adults in the United States spend many waking hours, and it has a profound influence on health and well-being. Although some occupations and work-related activities are more hazardous than others and face higher rates of injuries, illness, disease, and fatalities, workers in all occupations face some form of work-related safety and health concerns. Understanding those risks to prevent injury, illness, or even fatal incidents is an important function of society. Occupational safety and health (OSH) surveillance provides the data and analyses needed to understand the relationships between work and injuries and illnesses in order to improve worker safety and health and prevent work-related injuries and illnesses. Information about the circumstances in which workers are injured or made ill

on the job and how these patterns change over time is essential to develop effective prevention programs and target future research. The nation needs a robust OSH surveillance system to provide this critical information for informing policy development, guiding educational and regulatory activities, developing safer technologies, and enabling research and prevention strategies that serves and protects all workers. A Smarter National Surveillance System for Occupational Safety and Health in the 21st Century provides a comprehensive assessment of the state of OSH surveillance. This report is intended to be useful to federal and state agencies that have an interest in occupational safety and health, but may also be of interest broadly to employers, labor unions and other worker advocacy organizations, the workers' compensation insurance industry, as well as state epidemiologists, academic researchers, and the broader public health

community. The recommendations address the strengths and weaknesses of the envisioned system relative to the status quo and both short- and long-term actions and strategies needed to bring about a progressive evolution of the current system.
