Transforming the Workforce for Children Birth Through Age 8 Dec 17 2021 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well.

Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific

actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

*Eager to Learn* Dec 05 2020 Clearly babies come into the world remarkably receptive to its wonders. Their alertness to sights, sounds, and even abstract concepts makes them inquisitive explorers—and learners—every waking minute. Well before formal schooling begins, children's early experiences lay the foundations for their later social behavior, emotional regulation, and literacy. Yet, for a variety of reasons, far too little attention is given to the quality of these crucial years. Outmoded theories, outdated facts, and undersized budgets all play a part in the uneven quality of early childhood programs throughout our country. What will it take to provide better early education and care for our children between the ages of two and five? *Eager to Learn* explores this crucial question, synthesizing the newest research findings on how young children learn and the impact of early learning. Key discoveries in how young

children learn are reviewed in language accessible to parents as well as educators: findings about the interplay of biology and environment, variations in learning among individuals and children from different social and economic groups, and the importance of health, safety, nutrition and interpersonal warmth to early learning. Perhaps most significant, the book documents how very early in life learning really begins. Valuable conclusions and recommendations are presented in the areas of the teacher-child relationship, the organization and content of curriculum, meeting the needs of those children most at risk of school failure, teacher preparation, assessment of teaching and learning, and more. The book discusses: Evidence for competing theories, models, and approaches in the field and a hard look at some day-to-day practices and activities generally used in preschool. The role of the teacher, the importance of peer interactions, and other relationships in the child's life. Learning needs of minority children, children with disabilities, and other special groups. Approaches to assessing young children's learning for the purposes of policy decisions, diagnosis of educational difficulties, and instructional planning. Preparation and continuing development of teachers. *Eager to Learn* presents a comprehensive, coherent picture of early childhood learning, along with a clear path toward improving this important stage of life for all children.

**Early Engineering Learning** Dec 25 2019

This book addresses engineering learning in early childhood, spanning ages 3 to 8 years. It explores why engineering experiences are important in young children's overall development and how engineering is a core component of early STEM learning, including how engineering education links and supports children's existing experiences in science, mathematics, and design and technology, both before school and in the early school years.

Promoting STEM education across the school years is a key goal of many nations, with the realization that building STEM skills required by societies takes time and needs to begin as early as possible. Despite calls from national and international organisations, the inclusion of engineering-based learning within elementary and primary school programs remains limited in many countries. Engineering experiences for young children in the pre-school or early school years has received almost no attention, even though young children can be considered natural engineers. This book addresses this void by exposing what we know about engineering for young learners, including their capabilities for solving engineering-based problems and the (few) existing programs that are capitalising on their potential.

*Parenting Matters* Aug 21 2019 Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing

demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. *Parenting Matters* identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

**The Most Important Year** Apr 09 2021 An eye-opening look inside pre-K in America and what it will take to give all children the best start in school possible. At the heart of this groundbreaking book are two urgent questions: What do our young children need in the earliest years of school, and how do we ensure that they all get it? Cutting-edge research has proven

that early childhood education is crucial for all children to gain the academic and emotional skills they need to succeed later in life. Children who attend quality pre-K programs have a host of positive outcomes including better language, literacy, problem-solving and math skills down the line, and they have a leg up on what appears to be the most essential skill to develop at age four: strong self-control. But even with this overwhelming evidence, early childhood education is at a crossroads in America. We know that children can and do benefit, but we also know that too many of our littlest learners don't get that chance—millions of parents can't find spots for their children, or their preschoolers end up in poor quality programs. With engrossing storytelling, journalist Suzanne Bouffard takes us inside some of the country's best pre-K classrooms to reveal the sometimes surprising ingredients that make them work—and to understand why some programs are doing the opposite of what is best for children. It also chronicles the stories of families and teachers from many backgrounds as they struggle to give their children a good start in school. This book is a call to arms when we are at a crucial moment, and perhaps on the verge of a missed opportunity: We now have the means and the will to have universal pre-kindergarten, but we are also in grave danger of not getting it right. *Ftce Prekindergarten/Primary Pk-3 Secrets Study Guide: Ftce Test Review for the Florida Teacher Certification Examinations* Oct 03

*Building the Reading Brain, PreK-3* Mar 20 2022 "An excellent, important book!" Robert Sylwester Author, *A Biological Brain in a Cultural Classroom*. "Although there is an enormous amount of information, the simplicity of the language, the chronology of reading development, and the suggested practices or strategies at various stages create a comprehensive, meaningful, and relevant text." Yvette Jackson, Executive Director, National Urban Alliance. Meet the most important challenge of education by ensuring that every child can read! The brain is hardwired for spoken language but not for reading. Yet reading skills serve as the primary foundation of all school-based learning. Research indicates that a student's future academic success can be

predicted by his or her reading level at the end of third grade. Patricia Wolfe and Pamela Nevills bring insight and assistance to preschool educators, parents and care providers, kindergarten and primary grade teachers for this essential process. They explain the development of the young brain, the acquisition of language as preparation for reading, and the nurturing and instruction process from birth to age eight. This unique guide demonstrates how the brain of a child masters the reading process of decoding print and reading with fluency and comprehension and addresses related literacy skills of writing and spelling. Brain-friendly strategies that lay the groundwork for reading success include: Activities to support phonemic awareness, phonics, vocabulary, comprehension, and fluency; Applications of games, music, play, and instruction; Intervention suggestions for children who are challenged or discouraged early readers. Learning to read is a complex, gradual process that begins in infancy and Building the Reading Brain, PreK-3 provides insights and guidelines to help early childhood educators, parents, and care providers and K-3 teachers to meet the challenge of insuring that every child learns to read with fluency and comprehension.
