**Sustainable  
Procurement in  
Supply Chain  
Operations** Feb 25

2020 Sustainable  
Procurement is an  
emerging concept  
in supply chain and  
operations  
management.

Manufacturing  
industries have  
made  
improvements in  
moving from cost-  
based to quality-

based, and  
customer-focused  
supply chain  
management  
strategies. This is  
becoming an  
integrated  
component in the  
supply chain  
system, with  
players becoming  
aware of the  
regulations and  
needs of the  
customer. It is  
imperative for  
production firms to  
look at the  
procurement  
activity as one of  
the strategic  
enablers for  
sustaining the  
business in the  
competitive global

environment. This book will provide industries with an understanding of the concepts related to sustainable procurement policies and its implementation. Provides decision and theory development models in sustainable procurement supply chains Includes contributions in all three major analytics: descriptive, predictive, and perspectives in the context of sustainable procurement supply chain Discusses new business models with suppliers and opportunities for co-branding Covers how to develop new tools to measure

and allocate the gains from sustainable practices among stakeholders  
Analyses the science of translating data into meaningful and actionable insights

**The Broadview Anthology of British Literature Volume 4: The Age of Romanticism - Second Edition**  
Jun 11 2021 In all six of its volumes  
The Broadview Anthology of British

Literature presents British literature in a truly distinctive light. Fully grounded in sound literary and historical scholarship, the anthology takes a fresh approach to many canonical authors, and includes a wide selection of work by lesser-known writers. The anthology also provides wide-ranging coverage of the worldwide connections of British literature, and it pays attention throughout to issues of race, gender, class, and sexual orientation. It includes comprehensive introductions to each period, providing in each case an overview of

the historical and cultural as well as the literary background. It features accessible and engaging headnotes for all authors, extensive explanatory annotations, and an unparalleled number of illustrations and contextual materials. Innovative, authoritative and comprehensive, The Broadview Anthology of British Literature has established itself as a leader in the field. The full anthology comprises six bound volumes, together with an extensive website component; the latter has been edited, annotated, and designed according to the same high

standards as the bound book component of the anthology, and is accessible by using the passcode obtained with the purchase of one or more of the bound volumes. The second edition of volume 4: The Age of Romanticism includes James Hogg, Matthew Gregory Lewis, and John Polidori as well as new selections by Mary Shelley, Sir Walter Scott, Maria Edgeworth, Anna Laetitia Barbauld, and Percy Shelley. The new edition also includes two new sections of contextual materials. New to the bound book is "The Natural, The Human, The Supernatural, and the Sublime"—a

section that includes not only a good selection of material from writers such as Edmund Burke and artists such as J.M.W. Turner but also material that may be less well known on topics such as changing human attitudes towards non-animals. New to the website is a wide-ranging selection of contextual materials on the Industrial Revolution, entitled "Steam Power and the Machine Age". Additional highlights of this volume include: Jane Austen's *Lady Susan*, a lesser-known but wonderfully readable epistolary short novel; "A Hymn to Na'ra'yena" by Sir

William Jones; and, in an exception to the anthology's general policy of including works in their entirety, Mary Shelley is represented by the last two chapters of *The Last Man* and by a selection of letters.

Wow! Cody

Investigates the World of Wellness

Apr 28 2020

Through the voice of a third grade boy, teaches about different health and wellness topics, including physical education, hygiene, nutrition, disease prevention, drugs, and consumer health.

**Green in Software Engineering** May 30 2020 This is the first book that

presents a comprehensive overview of sustainability aspects in software engineering. Its format follows the structure of the SWEBOK and covers the key areas involved in the incorporation of green aspects in software engineering, encompassing topics from requirement elicitation to quality assurance and maintenance, while also considering professional practices and economic aspects. The book consists of thirteen chapters, which are structured in five parts. First the "Introduction" gives an overview of the primary general concepts related to

Green IT, discussing what Green in Software Engineering is and how it differs from Green by Software Engineering. Next "Environments, Processes and Construction" presents green software development environments, green software engineering processes and green software construction in general. The third part, "Economic and Other Qualities," details models for measuring how well software supports green software engineering techniques and for performing trade-off analyses between alternative green practices from an economic

perspective. "Software Development Process" then details techniques for incorporating green aspects at various stages of software development, including requirements engineering, design, testing, and maintenance. In closing, "Practical Issues" addresses the repercussions of green software engineering on decision-making, stakeholder participation and innovation management. The audience for this book includes software engineering researchers in academia and industry seeking to understand the challenges and

impact of green aspects in software engineering, as well as practitioners interested in learning about the state of the art in Green in Software Engineering.

**Advances in Materials Sciences, Energy Technology and Environmental**

**Engineering** Mar 28 2020 The 2016 International Conference on Materials Science, Energy Technology and Environmental Engineering (MSETEE 2016) took place May 28-29, 2016 in Zhuhai City, China. MSETEE 2016 brought together academics and industrial experts in the field of materials science, energy technology and environmental engineering. The primary goal of the conference was to promote research and developmental activities in these research areas and to promote scientific information interchange between researchers, developers,

engineers, students, and practitioners working around the world. The conference will be held every year serving as platform for researchers to share views and experience in materials science, energy technology and environmental engineering and related areas.

**Advances in Artificial Systems for Medicine and Education VI** Dec 25 2019 The book provides a thorough overview of recent developments in the design of AI systems and their uses in a range of industries, including education, technology, and bioinformatics. The papers in the proceedings were

presented at the Sixth International Conference on Artificial Intelligence, Medical Engineering, and Education (AIMEE2022), which took place in Wuhan, China, from August 19 to 21, 2022. The book underlines the need for the intensification of training of an increasing number of appropriate specialists given the rapid growth of AI systems. In order to replicate human and other species' natural intelligence in digital AI systems, the researchers have been studying genetics and inherited biological processes in-depth. These studies offer fresh ideas for

developing ever more powerful AI techniques. The featured articles cover a variety of themes in the fields of mathematics and biomathematics, medical approaches, technical and educational approaches, and medical approaches. The book is a compilation of recent academic papers in the discipline, covering a wide range of topics that are important to both business managers and engineers. This proceedings is a fantastic resource for asset management practitioners, researchers, and academics, as well as undergraduate and graduate

students who are interested in AI, bioinformatics systems, and their developing applications. This is due to the breadth and depth of the proceedings.

Experts, students, and other people who are interested in learning about how AI systems might be used in the future are the target audience.

**Content Area Reading and Learning** Oct 15 2021

How can teachers make content-area learning more accessible to their students? This text addresses instructional issues and provides a wealth of classroom strategies to help all middle and secondary teachers effectively enable their students to develop both content concepts and strategies for continued learning. The goal is to help teachers model, through excellent

instruction, the importance of lifelong content-area learning. This working textbook provides students maximum interaction with the information, strategies, and examples presented in each chapter. This book is organized around five themes: Content Area Reading: An Overview The Teacher and the Text The Students The Instructional Program School Culture and Environment in Middle and High School Classrooms. Pedagogical features in each chapter include: a graphic organizer; a chapter overview, Think Before, Think While and Think After Reading

Activities - which are designed to integrate students' previous knowledge and experience with their new learnings about issues related to content area reading, literacy, and learning, and to serve as catalysts for thinking and discussions. This textbook is intended as a primary text for courses on middle and high school content area literacy and learning.

**Sustainable Industrial Engineering along Product-Service Life Cycle/Supply Chain** May 10 2021  
Sustainable industrial engineering addresses the sustainability issue from economic,

environmental, and social points of view. Its application fields are the whole value chain and lifecycle of products/services, from the development to the end-of-life stages. This book aims to address many of the challenges faced by industrial organizations and supply chains to become more sustainable through reinventing their processes and practices, by continuously incorporating sustainability guidelines and practices in their decisions, such as circular economy, collaboration with suppliers and customers, using information technologies and systems, tracking

their products' life-cycle, using optimization methods to reduce resource use, and to apply new management paradigms to help mitigate many of the wastes that exist across organizations and supply chains. This book will be of interest to the fast-growing body of academics studying and researching sustainability, as well as to industry managers involved in sustainability management.

*Computational Logistics* Nov 04 2020 This book constitutes the proceedings of the 11th International Conference on Computational Logistics, ICCL 2020, held in Enschede, The

Netherlands, in September 2020. The 49 papers included in this book were carefully reviewed and selected from 73 submissions. They were organized in topical sections named: maritime and port logistics; vehicle routing and scheduling; freight distribution and city logistics; network design and scheduling; and selected topics in logistics. Due to the Corona pandemic ICCL 2020 was held as a virtual event.

### **Towards Creative Imagination in Victorian**

**Literature** Aug 13 2021 This book explores the concept of the creative imagination in Mid- and Late Victorian England. In these

times of transition, as the age of the Industrial Revolution was regarded, aesthetic considerations became involved in the broader debate on the shape of the modern world. Thus, the approach to the artistic imagination was closely connected with the shifting beliefs concerning the essence of beauty, and the role of religion, not to mention attitudes towards nature and society. These aspects defined the aims furthered by painters and poets alike and set the direction for their artistic endeavours. Five people have been chosen as representatives of their time in the discussion about artistic imagination:

John Ruskin, William Morris, Dante Gabriel Rossetti, Walter Pater and Arthur Symons. Accordingly, the material analysed to recreate the Victorian understanding of the artistic faculties is of different kinds, and embraces not only critical essays (Ruskin, Pater, Symons), but also belles-lettres: short stories (Morris) and poems (Rossetti, Symons). In this manner, two positions complement each other: namely, the views of the theoreticians and those of practitioners. The former attempted to discern and extract the quintessence of the artistic powers on

the basis of their observations and reflections, whereas the latter relied on their personal experiences in this respect.

**Green Marketing Strategy in Enhancing Consumer's Green Level** Aug 01 2020  
Environmental awareness has increased rapidly around the globe in recent years because it's occurring now. This has lead to increasing consumer demands for greentailing. This research will therefore determine to what extent marketing mix, factors affecting

consumer's buying behavior and consumer's knowledge on climate change issues influence the consumer's green level. The main purpose of this study is to determine how is JABODETABEK consumer's green level in terms of green, greener and greenest and what factors influence it. This study started with FGD (focus group discussion) to gain preliminary data and continue with questionnaire that was distributed through greentailing consumer. Hypotheses were constructed after

literature review and FGD. Testing on the data obtained with descriptive analysis and SEM analysis This research has led to a conclusion of consumers green level in JABODETABEK is in green position. The main findings are on how to generate green marketing strategy, which must consists the combination of marketing mix and factors affecting consumer's buying behavior.
