Roots and Wings Jun 08 2020 Silf deftly brings together science and spirituality, allowing a bold new synthesis to emerge between them. She encourages readers to think about what it might mean to become fully and truly human.

The First Word May 08 2020 An accessible exploration of a burgeoning new field: the incredible evolution of language The first popular book to recount the exciting, very recent developments in tracing the origins of language, *The First Word* is at the forefront of a controversial, compelling new field. Acclaimed science writer Christine Kenneally explains how a relatively small group of scientists that include Noam Chomsky and Steven Pinker assembled the astounding narrative of how the fundamental process of evolution produced a linguistic ape—in other words, us. Infused with the wonder of discovery, this vital and engrossing book offers us all a better understanding of the story of humankind.

The Five-Million-Year Odyssey Aug 11 2020 The epic story of human evolution, from our primate beginnings more than five million years ago to the agricultural era Over the course of five million years, our primate ancestors evolved from a modest population of sub-Saharan apes into the globally dominant species *Homo sapiens*. Along the way, humans became incredibly diverse in appearance, language, and culture. How did all of this happen? In *The Five-Million-Year Odyssey*, Peter Bellwood synthesizes research from archaeology, biology, anthropology, and linguistics to immerse us in the saga of human evolution, from the earliest traces of our hominin forebears in Africa, through waves of human expansion across the continents, and to the rise of agriculture and explosive demographic growth around the world. Bellwood presents our modern diversity as a product of both evolution, which led to the emergence of the genus *Homo* approximately 2.5 million years ago, and migration, which carried humans into new environments. He introduces us to the ancient hominins—including the australopithecines, *Homo erectus*, the Neanderthals, and others—before turning to the appearance of *Homo sapiens* circa 300,000 years ago and subsequent human movement into Eurasia, Australia, and the Americas. Bellwood then explores the invention of agriculture, which enabled farmers to disperse to new territories over the last 10,000 years, facilitating the spread of language families and cultural practices. The outcome is now apparent in our vast array of contemporary ethnicities,

linguistic systems, and customs. The fascinating origin story of our varied human existence, *The Five-Million-Year Odyssey* underscores the importance of recognizing our shared genetic heritage to appreciate what makes us so diverse.

Dare to Be Human Nov 13 2020 Daniel is 35, successful, a high level professional and an accomplished academic - yet he is also a virgin, who fears that he will spend the rest of his life alone. More importantly, Daniel has existed in an emotional bubble all of his life, and has had no intimate friendships. In other words, he is not fully alive, and seeks psychotherapy because he is haunted by not understanding what is wrong with him. He is attractive to women, yet as soon as a woman tries to get close to him, he runs away. Lacking an inner foundation, he fears that women will annihilate him, like his overbearing mother who abused him as a child. Quite simply, this book is an unprecedented achievement, taking the reader into actual psychoanalytic sessions and sharing with the reader Michael Shoshani Rosenbaum's dialogues with Daniel, vividly illustrating his pain and struggle to transcend his existential plight. Furthermore, as the author of two sections of the book, Daniel himself provides a rare, insightful view from the other side of the couch, illuminating the challenge and change experienced within the other half of the therapeutic relationship. It is a compelling psychological adventure, fusing together the intimacy of the therapy with an account of the revolutionary changes that have occurred in the practice of psychotherapy and psychoanalysis over the last decades. Daniel is like no one else, and yet he is everyone, making this book a must for every person searching for self-knowledge, allowing the reader to identify with Daniel and his struggle to become human.

The Upright Thinkers Apr 18 2021 How did a near-extinct species, eking out a meager existence with stone axes, become the dominant power on earth, able to harness a knowledge of nature ranging from tiny atoms to the vast structures of the universe? Leonard Mlodinow takes us on an enthralling tour of the history of human progress, from our time on the African savannah through the invention of written language, all the way to modern quantum physics. Along the way, he explores the colorful personalities of the great philosophers, scientists, and thinkers, and traces the cultural conditions—and the elements of chance—that influenced scientific discovery. Deeply informed, accessible, and infused with the author's trademark humor and insight, *The Upright Thinkers* is a stunning tribute to humanity's intellectual curiosity and an important book for any reader with an interest in the scientific issues of our day.

Journey of the Mind: How Thinking Emerged from Chaos Feb 03 2020 Two neuroscientists reveal why consciousness exists and how it works by examining eighteen increasingly intelligent minds, from microbes to humankind—and beyond. Why do you exist? How did atoms and molecules transform into sentient creatures that experience longing, regret, compassion, and even marvel at their own existence? What does it truly mean to have a mind—to think? Science has offered few answers to these existential questions until now. *Journey of the Mind* is the first book to offer a unified account of the mind that explains how consciousness, language, self-awareness, and civilization arose incrementally out of chaos. The journey begins three billion years ago with the emergence of the universe's simplest possible mind. From there, the book explores the nanoscopic archaeon, whose thinking machinery consists of a handful of molecules, then advances through amoebas, worms, frogs, birds, monkeys, and humans, explaining what each "new" mind could do that previous minds could not. Though they admire the triumph of human consciousness, Ogi Ogas and Sai Gaddam argue that humans are hardly the most sophisticated minds on the

planet. The same physical principles that produce human self-awareness are leading cities and nation-states to develop “superminds,” and perhaps planting the seeds for even higher forms of consciousness. Written in lively, accessible language accompanied by vivid illustrations, *Journey of the Mind* is a mind-bending work of popular science, the first general book to share the cutting-edge mathematical basis for consciousness, language, and the self. It shows how a “unified theory of the mind” can explain the mind’s greatest mysteries—and offer clues about the ultimate fate of all minds in the universe.

Being Me Apr 06 2020 ‘O brave new world, That has such people in’t!’ Shakespeare, *The Tempest* New scientific developments are changing the world, but whether the world of our children and grandchildren will be the hell of Huxley’s *Brave New World* or the sheltered paradise described by Shakespeare depends on how we choose to use these developments. That choice will frequently be driven by our appreciation of what human beings really are. In this thought-provoking book Pete Moore presents an antidote to the scientific reductionism that so frequently seeks to narrow any definition of our species by single features, such as our genes or the ability of our brains. This exploration of the nature of humanity reveals the rainbow spectrum that makes us who we are. Through discussions with individuals whose lives help us to focus on individual aspects of our make up, Moore explores the difficult issues that are facing us. This book provides a timely reminder that technology cannot be separated from its impact on real people and how their lives are changed for the better or worse. Medical developments offer tremendous opportunities for good, but if we lose sight of what it is to be human they also have the ability to be used for very dangerous, even evil purposes. We have a chance to influence this future. We should not ignore the challenge. DR PETE MOORE is a medical journalist and an official rapporteur at Windsor Castle and the House of Lords. He is the author of *Blood and Justice* (0470 848421, Hbk / 0470 84844 8 Pbk).

A Walk in the Physical Aug 30 2019 You existed before your human experience, and you will exist after. Drawing from his unique pre-birth memories, Christian Sundberg provides an encouraging framework for understanding the nature of the human experience within the larger spiritual context. *A Walk in the Physical* is a non-linear reality model that boils down the very vast into succinct accessible language. More than a set of ideas though, it is a tool meant to point you towards the portion of yourself that already exists right now beyond Earth. At the heart of the book is the theme of love, and it describes why authentic love – even in small matters – is so deeply important to our human journey.

Your Inner Fish Aug 23 2021 Neil Shubin, the paleontologist and professor of anatomy who co-discovered Tiktaalik, the “fish with hands,” tells the story of our bodies as you’ve never heard it before. The basis for the PBS series. By examining fossils and DNA, he shows us that our hands actually resemble fish fins, our heads are organized like long-extinct jawless fish, and major parts of our genomes look and function like those of worms and bacteria. *Your Inner Fish* makes us look at ourselves and our world in an illuminating new light. This is science writing at its finest—enlightening, accessible and told with irresistible enthusiasm.

Anticipation, Sustainability, Futures and Human Extinction Nov 01 2019 This book considers the philosophical underpinnings, policy foundations, institutional innovations, and deep cultural changes needed to ensure that humanity has the best chance of surviving and flourishing into the very distant future. Anticipation of threats to the sustainability of human civilization needs to encompass time periods that span not just decades but millennia. All

existential risks need to be jointly assessed, as opposed to addressing risks such as climate change and pandemics separately. Exploring the potential events that are likely to cause the biggest risks as well as asking why we should even desire to thrive into the distant future, this work looks at the 'biggest picture possible' in order to argue that futures-oriented decision-making ought to be a permanent aspect of human society and futures-oriented policy making must take precedent over the day-to-day policy making of current generations in times of great peril. The book concludes with a discourse on the truly fundamental bottom-up changes needed in our personal psychologies and culture to support these top-down recommendations. This book is of great interest to philosophers, policy analysts, political scientists, economists, psychologists, planners, and theologians.

The Hours of the Universe May 20 2021

Mind: A Journey to the Heart of Being Human (Norton Series on Interpersonal Neurobiology) Oct 01 2019 A New York Times Bestseller. A scientist's exploration into the mysteries of the human mind. What is the mind? What is the experience of the self truly made of? How does the mind differ from the brain? Though the mind's contents—its emotions, thoughts, and memories—are often described, the essence of mind is rarely, if ever, defined. In this book, noted neuropsychiatrist and New York Times best-selling author Daniel J. Siegel, MD, uses his characteristic sensitivity and interdisciplinary background to offer a definition of the mind that illuminates the how, what, when, where, and even why of who we are, of what the mind is, and what the mind's self has the potential to become. MIND takes the reader on a deep personal and scientific journey into consciousness, subjective experience, and information processing, uncovering the mind's self-organizational properties that emerge from both the body and the relationships we have with one another, and with the world around us. While making a wide range of sciences accessible and exciting—from neurobiology to quantum physics, anthropology to psychology—this book offers an experience that addresses some of our most pressing personal and global questions about identity, connection, and the cultivation of well-being in our lives.

Researching Local History Sep 04 2022 This practical but inspiring book considers what local history is, why researching it is valuable and rewarding, and how we should go about it. Issues addressed include: getting oral and documentary evidence; keeping records; the nature of data, information and knowledge; and their use to create the different products of local history research. Michael Williams is both a professional scientist and a local historian of long standing, and he uses both sides of his experience in a text that is at once rigorous about the historical process, and also a fascinating - and often moving - account of his adventures into the past of his own family and community. He demonstrates local history methodology through his research into ancestry, migration, work, war and religion in the towns and villages of England and Wales. It is richly illustrated throughout.

The Journey of Man Jan 28 2022 Around 60,000 years ago, a man, genetically identical to us, lived in Africa. Every person alive today is descended from him. How did this real-life Adam wind up as the father of us all? What happened to the descendants of other men who lived at the same time? And why, if modern humans share a single prehistoric ancestor, do we come in so many sizes, shapes, and races? Examining the hidden secrets of human evolution in our genetic code, the author reveals how developments in the revolutionary science of population genetics have made it possible to create a family tree for the whole of humanity. Replete with marvelous anecdotes and remarkable information, from the truth about the real Adam and Eve to the way differing racial types emerged, this book is an

enthraling, epic tour through the history and development of early humankind.

Journey of the Universe Sep 11 2020 The authors tell the epic story of the universe from an inspired new perspective, weaving the findings of modern science together with enduring wisdom found in the humanistic traditions of the West, China, India, and indigenous peoples. This book is part of a larger project that includes a documentary film, educational DVD series, and Web site.

Human Journey Oct 05 2022 Reach back through time and shake hands with your ancestors. Run alongside a group of early humans on a blazing African savannah as they take the first steps in a journey that leads -- eventually -- to all of us. Professor Alice Roberts takes you on a voyage of evolution and migration from the first humans around two and a half million years ago to horse riders galloping into the dawn of the Bronze Age.

Before the Dawn Dec 03 2019 "Meaty, well-written." —Kirkus Reviews "Timely and informative." —The New York Times Book Review "By far the best book I have ever read on humanity's deep history." —E. O. Wilson, biologist and author of *The Ants* and *On Human Nature* Nicholas Wade's articles are a major reason why the science section has become the most popular, nationwide, in the New York Times. In his groundbreaking *Before the Dawn*, Wade reveals humanity's origins as never before—a journey made possible only recently by genetic science, whose incredible findings have answered such questions as: What was the first human language like? How large were the first societies, and how warlike were they? When did our ancestors first leave Africa, and by what route did they leave? By eloquently solving these and numerous other mysteries, Wade offers nothing less than a uniquely complete retelling of a story that began 500 centuries ago.

Touching the Heart Sep 23 2021 No one can write about storytelling like Father Bill Bausch. Both his words and his stories are compelling, convincing, and completely absorbing. Here in this landmark work, which he insists is his last, his goal is to help readers see the centrality of stories, to read and hear Scripture as story and not as history, and to learn to enrich and expand their lives by looking at the ?story behind the story.? He wants to break readers out of the literalism that constricts their spiritual and social lives, so they might gain an appreciation of metaphor and symbol and the ?sacramentality? of the world.

World History Jun 01 2022

Super Stomach Dec 15 2020

Gaia Mar 30 2022 The first popularly written explanation of the scientific theory galvanizing both New Age and scientific circles: the GAIA Hypothesis.

Wayfinding Jul 22 2021 At once far flung and intimate, a fascinating look at how finding our way make us human. "A marvel of storytelling." —Kirkus (Starred Review) In this compelling narrative, O'Connor seeks out neuroscientists, anthropologists and master navigators to understand how navigation ultimately gave us our humanity. Biologists have been trying to solve the mystery of how organisms have the ability to migrate and orient with such precision—especially since our own adventurous ancestors spread across the world without maps or instruments. O'Connor goes to the Arctic, the Australian bush and the South Pacific to talk to masters of their environment who seek to preserve their traditions at a time when anyone can use a GPS to navigate. O'Connor explores the neurological basis of spatial orientation within the hippocampus. Without it, people inhabit a dream state, becoming amnesiacs incapable of finding their way, recalling the past, or imagining the future. Studies have shown that the more we exercise our cognitive mapping skills, the greater the grey matter and health of our hippocampus. O'Connor talks to scientists

studying how atrophy in the hippocampus is associated with afflictions such as impaired memory, dementia, Alzheimer's Disease, depression and PTSD. Wayfinding is a captivating book that charts how our species' profound capacity for exploration, memory and storytelling results in topophilia, the love of place. "O'Connor talked to just the right people in just the right places, and her narrative is a marvel of storytelling on its own merits, erudite but lightly worn. There are many reasons why people should make efforts to improve their geographical literacy, and O'Connor hits on many in this excellent book—devouring it makes for a good start." —Kirkus Reviews

The Making of You Nov 25 2021 Join Katharina Vestre on an adventure to relive your very first moments. From your first cell to your first breath, this is your story as you have never heard it before. Did you know it took three attempts to make your kidneys? Or that tiny twirling hairs on your back showed your other organs where to go? Or that hiccups are probably a legacy from our ancient, underwater ancestors? With cutting-edge science and a wry sense of humour, Vestre reveals all this and more. Like: how sperm know which way to swim. Why sex and gender are more complicated than one might think. What you have in common with every living being, and why you are unique. Set off on a true voyage of discovery through an inner universe whose secrets we are still unravelling. A miniature drama of cosmic significance, this is the story of how you became you.

The Human Journey Jan 08 2023 The Human Journey offers a truly concise yet satisfyingly full history of the world from ancient times to the present. Its themes include not only the great questions of the humanities—nature versus nurture, the history and meaning of human variation, the sources of wealth, and causes of revolution—but also the major transformations in human history: agriculture, cities, iron, writing, universal religions, global trade, industrialization, popular government, justice, and equality. Beginning with our most important questions and searching all of our past for answers, this is world history in a grand humanistic tradition.

The Great Human Journey Feb 26 2022 Introduces concepts of evolution and biodiversity, discussing such topics as naturalism, genetics, and adaptation.

Defying Dystopia Jul 10 2020 To most, the collapse of modern civilization is the stuff of fiction. Yet, science confirms that misuse of technology and environmental abuse places our world in grave danger of ruin. The World Scientists' Warning to Humanity places our civilization on a collision course. Defying Dystopia analyses how we have come to this, and what options remain for far-seeing people to take control of their own destiny and survive the future. Ed Ayres, who has worked with some iconic environmental scientists of the past half-century, argues that technology was originally used to augment the natural strengths of humans, but has been increasingly used in ways that weaken us—shifting from useful work to the industries of distraction, entertainment, convenience, pain-relief, and sedation. Ayres advises on how at least some of us can avoid that collision. The most critical task, for those of us who want humanity to survive and thrive, is to disengage from our tech thralldom, and shift to a conscious management of our evolution in which we use technology to enhance our skills and strengths rather than erode or supplant them. Ayres provides insightful, actionable suggestions we can use to increase our odds of survival. He asks far-seeing individuals to take on a mission that the dominant governments and institutions demonstrably cannot: the epic task of shepherding a low-profile, resilient transition to a new kind of human future.

The Incredible Human Journey Nov 06 2022 Alice Roberts has been travelling the world -

from Ethiopian desert to Malay peninsula and from Russian steppes to Amazon basin - in order to understand the challenges that early humans faced as they tried to settle continents. On her travels she has witnessed some of the daunting and brutal challenges our ancestors had to face: mountains, deserts, oceans, changing climates, terrifying giant beasts and volcanoes. But she discovers that perhaps the most serious threat of all came from other humans. When our ancestors set out from Africa there were already two other species of human on the planet: Neanderthal in Europe and Homo erectus in Asia. Both (contrary to popular perception) were intelligent, adept at making tools and weapons and were long adapted to their environments. So, Alice asks, why did only Homo sapiens survive? Part detective story, part travelogue, and drawing on the latest genetic and archaeological discoveries, Alice examines how our ancestors evolved physically in response to these challenges, finding out how our colour, shape, size, diet, disease resistance and even athletic ability have been shaped by the range of environments that our ancestors had to survive. She also relates how astonishingly closely related we all are. As a lecturer in Anatomy at Bristol University, Alice Roberts is eminently qualified to write this book. As a talented artist, she is perfectly qualified to illustrate it, and dotted throughout this lively book are many of the sketches and photographs from her travels.

World History through Case Studies Apr 30 2022 This innovative textbook demystifies the subject of world history through a diverse range of case studies. Each chapter looks at an event, person, or place commonly included in comprehensive textbooks, from prehistory to the present and from across the globe - from the Kennewick Man to gladiators and modern-day soccer and globalization - and digs deeper, examining why historians disagree on the subject and why their debates remain relevant today. By taking the approach of 'unwrapping the textbook,' David Eaton reveals how historians think, making it clear that the past is not nearly as tidy as most textbooks suggest. Provocative questions like whether ancient Greece was shaped by contact with Egypt provide an entry point into how history professors may sharply disagree on even basic narratives, and how historical interpretations can be influenced by contemporary concerns. By illuminating these historiographical debates, and linking them to key skills required by historians, *World History through Case Studies* shows how the study of history is relevant to a new generation of students and teachers.

The Upright Thinkers Jul 02 2022 In this fascinating and illuminating work, Leonard Mlodinow guides us through the critical eras and events in the development of science, all of which, he demonstrates, were propelled forward by humankind's collective struggle to know. From the birth of reasoning and culture to the formation of the studies of physics, chemistry, biology, and modern-day quantum physics, we come to see that much of our progress can be attributed to simple questions-why? how?-bravely asked. Mlodinow profiles some of the great philosophers, scientists, and thinkers who explored these questions-Aristotle, Galileo, Newton, Darwin, Einstein and Lavoisier among them-and makes clear that just as science has played a key role in shaping the patterns of human thought, human subjectivity has played a key role in the evolution of science. At once authoritative and accessible, and infused with the author's trademark wit, this deeply insightful book is a stunning tribute to humanity's intellectual curiosity.

Balloon to the Moon Feb 14 2021 THE STORY OF THE HUMAN JOURNEY TO SPACE Long before anyone had designed a rocket, the Montgolfier brothers were making hot air balloons. In October 1783, they became the first people to experience controlled flight.

Balloon to the Moon starts there and leads to Neil Armstrong's 'small step' and beyond. But why stop there? Learn about the great innovations of the past, then get ready for BLAST OFF into an unknown but exciting future.

Researching Local History Mar 18 2021 This practical but inspiring book considers what local history is, why researching it is valuable and rewarding, and how we should go about it. Issues addressed include: getting oral and documentary evidence; keeping records; the nature of data, information and knowledge; and their use to create the different products of local history research. Michael Williams is both a professional scientist and a local historian of long standing, and he uses both sides of his experience in a text that is at once rigorous about the historical process, and also a fascinating - and often moving - account of his adventures into the past of his own family and community. He demonstrates local history methodology through his research into ancestry, migration, work, war and religion in the towns and villages of England and Wales. It is richly illustrated throughout.

The Human Journey Aug 03 2022 The Human Journey offers a truly concise yet satisfyingly full history of the world from ancient times to the present. The book's scope, as the title implies, is the whole story of humanity, in planetary context. Its themes include not only the great questions of the humanities—nature versus nurture, the history and meaning of human variation, the sources of wealth and causes of revolution—but also the major transformations in human history: agriculture, cities, iron, writing, universal religions, global trade, industrialization, popular government, justice, and equality. In each conceptually rich chapter, leading historian Kevin Reilly concentrates on a single important period and theme, sustaining a focused narrative and analytical perspective. Chapter 2, for example, discusses the significance of bronze-age urbanization and the advent of the Iron Age. Chapter 3 examines the meaning and significance of the age of “classical” civilizations. Chapter 4 explains the spread of universal religions and new technologies in the postclassical age of Eurasian integration. But these examples also reveal a range of approaches to world history. The first chapter is an example of current “Big History,” the second of history as technological transformations, the third of comparative history, the fourth the history of connections that dominates, and thus narrows, so many texts. Free of either a confined, limiting focus or a mandatory laundry list of topics, this book begins with our most important questions and searches all of our past for answers. Well-grounded in the latest scholarship, this is not a fill-in-the-blanks text, but world history in a grand humanistic tradition.

Processes in Human Evolution Oct 13 2020 The discoveries of the last decade have brought about a completely revised understanding of human evolution due to the recent advances in genetics, palaeontology, ecology, archaeology, geography, and climate science. Written by two leading authorities in the fields of physical anthropology and molecular evolution, Processes in Human Evolution presents a reconsidered overview of hominid evolution, synthesising data and approaches from a range of inter-disciplinary fields. The authors pay particular attention to population migrations - since these are crucial in understanding the origin and dispersion of the different genera and species in each continent - and to the emergence of the lithic cultures and their impact on the evolution of cognitive capacities. Processes in Human Evolution is intended as a primary textbook for university courses on human evolution, and may also be used as supplementary reading in advanced undergraduate and graduate courses. It is also suitable for a more general audience seeking a readable but up-to-date and inclusive treatment of human origins and evolution.

The Journey of Being Human Dec 27 2021 One of the twentieth century's greatest spiritual

teachers invites you onto the path that takes you through all of life's experiences and to embrace your own humanity. Man is a bridge, says Osho, between the animal and the divine—and our awareness of this dual aspect of our nature is what makes us human. It is also what makes us restless, full of conflict, so often at the crossroads of selfishness and generosity, of love and hate, frailty and strength, hope and despair. *The Journey of Being Human: Is It Possible to Find Real Happiness in Ordinary Life?* looks into how we might embrace and accept these apparent contradictions, rather than trying to choose between them, as the key to transforming each twist and turn of life's journey into a new discovery of who we are meant to be. Osho challenges readers to examine and break free of the conditioned belief systems and prejudices that limit their capacity to enjoy life in all its richness. He has been described by the Sunday Times of London as one of the "1000 Makers of the 20th Century" and by Sunday Mid-Day (India) as one of the ten people—along with Gandhi, Nehru, and Buddha—who have changed the destiny of India. Since his death in 1990, the influence of his teachings continues to expand, reaching seekers of all ages in virtually every country of the world.

The Human Journey Dec 07 2022 *The Human Journey* offers a truly concise yet satisfying full history of the world from ancient times to the present. Its themes include not only the great questions of the humanities--nature versus nurture, the history and meaning of human variation, the sources of wealth, and causes of revolution--but also the major transformations in human history: agriculture, cities, iron, writing, universal religions, global trade, industrialization, popular government, justice, and equality. Beginning with our most important questions and searching all of our past for answers, this is world history in a grand humanistic tradition.

The Unseen Body Mar 06 2020 "A fascinating, lyrical book... Reisman's experiences in other cultures bring a richness and depth to *The Unseen Body*. The way he thinks about the body and medicine—the rivers and tributaries, the flowing and unclogging, the top-down organization of the brain—is extraordinary!" —Mary Roach In this fascinating journey through the human body and across the globe, Dr. Reisman weaves together stories about our insides with a unique perspective on life, culture, and the natural world. Jonathan Reisman, M.D.—a physician, adventure traveler and naturalist—brings readers on an odyssey navigating our insides like an explorer discovering a new world with *The Unseen Body*. With unique insight, Reisman shows us how understanding mountain watersheds helps to diagnose heart attacks, how the body is made mostly of mucus, not water, and how urine carries within it a tale of humanity's origins. Through his offbeat adventures in healthcare and travel, Reisman discovers new perspectives on the body: a trip to the Alaskan Arctic reveals that fat is not the enemy, but the hero; a stint in the Himalayas uncovers the boundary where the brain ends and the mind begins; and eating a sheep's head in Iceland offers a lesson in empathy. By relating rich experiences in far-flung lands and among unique cultures back to the body's inner workings, he shows how our organs live inextricably intertwined lives—an internal ecosystem reflecting the natural world around us. Reisman offers a new and deeply moving perspective, and helps us make sense of our bodies and how they work in a way readers have never before imagined.

The Journey of a Book Jan 04 2020 *De proprietatibus rerum*, 'On the properties of things', has long been referred to by scholars as a medieval encyclopedia, but evidence suggests that it has been many things to many people. The sheer number of extant manuscript copies and printed editions, along with translations, adaptations, and mentions in poems

and sermons, testify to its continuous significance for Europeans of all estates and different walks of life, from the thirteenth to the seventeenth centuries. While first compiled soon after the time of St Francis by a humble continental friar to meet the needs of his expanding religious brotherhood, by 1600 English men of letters had claimed Bartholomew as a noble compatriot and national treasure. What was it about the work that propelled it through a progression of medieval cultures and into an exalted position in the world of English letters? This reception history traces evidence for the journey of 'Properties' over four centuries of social, political and religious change.

World History Oct 25 2021

Mysteries of the Human Journey Jun 20 2021

The Journey of Humanity Jan 16 2021 A landmark, radically uplifting account of our species' progress from one of the world's pre-eminent thinkers - with breakthrough insights into the power of diversity and our capacity to tackle climate change. 'Completely brilliant and utterly original ... a book for our epoch' Jon Snow, former presenter Channel 4 News 'Astounding in scope and insight ... provides the keys to the betterment of our species' Nouriel Roubini, author of *Crisis Economics* 'A masterful sweep through the human odyssey ... if you liked *Sapiens*, you'll love this' Lewis Dartnell, author of *Origins* In a captivating journey from the dawn of human existence to the present, world-renowned economist and thinker Oded Galor offers an intriguing solution to two of humanity's great mysteries. Why are humans the only species to have escaped - only very recently - the subsistence trap, allowing us to enjoy a standard of living that vastly exceeds all others? And why have we progressed so unequally around the world, resulting in the great disparities between nations that exist today? Immense in scope and packed with astounding connections, Galor's gripping narrative explains how technology, population size, and adaptation led to a stunning "phase change" in the human story a mere two hundred years ago. But by tracing that same journey back in time and peeling away the layers of influence - colonialism, political institutions, societal structure, culture - he arrives also at an explanation of inequality's ultimate causes: those ancestral populations that enjoyed fruitful geographical characteristics and rich diversity were set on the path to prosperity, while those that lacked it were disadvantaged in ways still echoed today. As we face ecological crisis across the globe, *The Journey of Humanity* is a book of urgent truths and enduring relevance, with lessons that are both hopeful and profound: gender equality, investment in education, and balancing diversity with social cohesion are the keys not only to our species' thriving, but to its survival.
