Active Learning in College Science Feb 26 2020 This book explores evidence-based practice in college science teaching. It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman's (2014) challenge seriously, and to investigate claims about the efficacy of alternative strategies in college science teaching. In editing this book, we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence, and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines. Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence. Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges, 4-year liberal arts institutions, comprehensive regional campuses, and flagship research universities. In keeping with Wieman's challenge, our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences. The content is structured as follows: after an Introduction based on Constructivist Learning Theory (Section I), the practices we explore are Eliciting Ideas and Encouraging Reflection (Section II); Using Clickers to Engage Students (Section III); Supporting Peer Interaction through Small Group Activities (Section IV); Restructuring Curriculum and Instruction (Section V); Rethinking the Physical Environment (Section VI); Enhancing Understanding with Technology (Section VII), and Assessing Understanding (Section VIII). The book's final section (IX) is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses. The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events. Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years. In this view, learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base. For most students, that knowledge base is riddled with a host of naïve notions, misconceptions and alternative conceptions they have acquired throughout their lives. To a considerable extent, the job of the teacher is to coax out these ideas; to help students understand how their ideas differ from the scientifically accepted view; to assist as students restructure and reconcile their newly acquired knowledge; and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances. Clearly, this prescription demands far more than most college and university scientists have been prepared for.

How to College Mar 21 2022 The first practical guide of its kind that helps students transition smoothly from high school to college The transition from high school—and home—to college can be stressful. Students and parents often arrive on campus unprepared for what college is really like. Academic standards and expectations are different from high school; families aren't present to serve as "scaffolding" for students; and first-years have to do what they call "adulting." Nothing in the college admissions process prepares students for these new realities. As a result, first-year college students report higher stress, more mental health issues, and lower completion rates than in the past. In fact, up to one third of first-year college students will not return for their second year—and colleges are reporting an increase in underprepared first-year students. *How to College* is here to help. Professors Andrea Malkin Brenner and Lara Schwartz guide first-year students and their families through the transition process, during the summer after high school graduation and throughout the school year, preparing students to succeed and thrive as they transition and adapt to college. The book draws on the authors' experience teaching, writing curricula, and designing programs for thousands of first-year college students over decades.

History of the College for the Deaf, 1857-1907 May 31 2020

College Jul 13 2021 As the commercialization of American higher education accelerates, more and more students are coming to college with the narrow aim of obtaining a preprofessional credential. The traditional four-year college experience—an exploratory time for students to discover their passions and test ideas and values with the help of teachers and peers—is in danger of becoming a thing of the past. In *College*, prominent cultural critic Andrew Delbanco offers a trenchant defense of such an education, and warns that it is becoming a privilege reserved for the relatively rich. In describing what a true college education should be, he demonstrates why making it available to as many young people as possible remains central to America's democratic promise. In a brisk and vivid historical narrative, Delbanco explains how the idea of college arose in the colonial period from the Puritan idea of the gathered church, how it struggled to survive in the nineteenth century in the shadow of the new research universities, and how, in the twentieth century, it slowly opened its doors to women, minorities, and students from low-income families. He describes the unique strengths of America's colleges in our era of globalization and, while recognizing the growing centrality of science, technology, and vocational subjects in the curriculum, he mounts a vigorous defense of a broadly humanistic education for all. Acknowledging the serious financial, intellectual, and ethical challenges that all colleges face today, Delbanco considers what is at stake in the urgent effort to protect these venerable institutions for future generations. In a new afterword, Delbanco responds to recent developments—both ominous and promising—in the changing landscape of higher education.

New Frontiers for College Education Oct 16 2021 The college sector is facing a growing number of new challenges caused by technological change, globalisation and the growth of mass higher education. *New Frontiers for College Education* considers the impact these changes have had and explores the developing role of college education in countries throughout the world. Whilst analysing the issues associated with providing high quality vocational education and training, the book also reflects on the role of colleges in widening access to both further and higher education. Drawing together contributions from leading international academics, policymakers and practitioners, the book explores common themes across these diverse societies, as well as some of the key challenges experienced within individual countries. It considers the distinctive contributions that colleges can make in responding to these challenges through apprenticeships and other types of vocational education and training. Contributors discuss the growing emphasis on creating more integrated systems of tertiary education, recognising that colleges and universities are now expected to work more closely together and that these diverse demands can be difficult to reconcile. Providing an authoritative and timely analysis of the changing role of colleges in contemporary society, this book will be of great interest to academics, researchers and postgraduate students in the areas of further and higher education, vocational education and training, lifelong learning, and skills development. It should also be essential reading for policymakers, as well as practitioners working in colleges and other institutions of higher and further education.

The Real World of College May 11 2021 Why higher education in the United States has lost its way, and how universities and colleges can focus sharply on their core mission. For *The Real World of College*, Wendy Fischman and Howard Gardner analyzed in-depth interviews with more than 2,000 students, alumni, faculty, administrators, parents, trustees, and others, which were conducted at ten institutions ranging from highly selective liberal arts colleges to less-selective state schools. What they found challenged characterizations in the media: students are not preoccupied by political correctness, free speech, or even the cost of college. They are most concerned about their GPA and their resumes; they see jobs and earning potential as more important than learning. Many say they face mental health challenges, fear that they don’t belong, and feel a deep sense of alienation. Given this daily reality for students, has higher education lost its way? Fischman and Gardner contend that US universities and colleges must focus sharply on their core educational mission. Fischman and Gardner, both recognized authorities on education and learning, argue that higher education in the United States has lost sight of its principal reason for existing: not vocational training, not the provision of campus amenities, but to increase what Fischman and Gardner call “higher education capital”—to help students think well and broadly, express themselves clearly, explore new areas, and be open to possible transformations. Fischman and Gardner offer cogent recommendations for how every college can become a community of learners who are open to change as thinkers, citizens, and human beings.

Demographics and the Demand for Higher Education Jun 12 2021 "The economics of American higher education are driven by one key factor--the availability of students willing to pay tuition--and many related factors that determine what schools they attend. By digging into the data, economist Nathan Grawe has created probability models for predicting college attendance. What he sees are alarming events on the horizon that every college and university needs to understand. Overall, he spots demographic patterns that are tilting the US population toward the Hispanic southwest. Moreover, since 2007, fertility rates have fallen by 12 percent. Higher education analysts recognize the destabilizing potential of these trends. However, existing work fails to adjust headcounts for college attendance probabilities and makes no systematic attempt to distinguish demand by institution type. This book analyzes demand forecasts by institution type and rank, disaggregating by demographic groups. Its findings often contradict the dominant narrative: while many schools face painful contractions, demand for elite schools is expected to grow by 15+ percent. Geographic and racial profiles will shift only slightly--and attendance by Asians, not Hispanics, will grow most. Grawe also use the model to consider possible changes in institutional recruitment strategies and government policies. These "what if" analyses show that even aggressive innovation is unlikely to overcome trends toward larger gaps across racial, family income, and parent education groups. Aimed at administrators and trustees with responsibility for decisions ranging from admissions to student support to tenure practices to facilities construction, this book offers data to inform decision-making--decisions that will determine institutional success in meeting demographic challenges"--

The End of College Feb 20 2022 From a renowned education writer comes a paradigm-shifting examination of the rapidly changing world of college that every parent, student, educator, and investor needs to understand. Over the span of just nine months in 2011 and 2012, the world's most famous universities and high-powered technology entrepreneurs began a race to revolutionize higher education. College courses that had been kept for centuries from all but an elite few were released to millions of students throughout the world—for free. Exploding college prices and a flagging global economy, combined with the derring-do of a few intrepid innovators, have created a dynamic climate for a total rethinking of an industry that has remained virtually unchanged for a hundred years. In *The End of College*, Kevin Carey, an education researcher and writer, draws on years of in-depth reporting and cutting-edge research to paint a vivid and surprising portrait of the future of education. Carey explains how two trends—the skyrocketing cost of college and the revolution in information technology—are converging in ways that will radically alter the college experience, upend the traditional meritocracy, and emancipate hundreds of millions of people around the world. Insightful, innovative, and accessible, *The End of College* is a must-read, and an important contribution to the developing conversation about education in this country.

Where You Go Is Not Who You'll Be Nov 05 2020 Read award-winning journalist Frank Bruni's New York Times bestseller: an inspiring manifesto about everything wrong with today's frenzied college admissions process and how to make the most of your college years. Over the last few decades, Americans have turned college admissions into a terrifying and occasionally devastating process, preceded by test prep, tutors, all sorts of stratagems, all kinds of rankings, and a conviction among too many young people that their futures will be determined and their worth established by which schools say yes and which say no. In *Where You Go is Not Who You'll Be*, Frank Bruni explains why this mindset is wrong, giving students and their parents a new perspective on this brutal, deeply flawed competition and a path out of the anxiety that it provokes. Bruni, a bestselling author and a columnist for the New York Times, shows that the Ivy League has no monopoly on corner offices, governors' mansions, or the most prestigious academic and scientific grants. Through statistics, surveys, and the stories of hugely successful people, he demonstrates that many kinds of colleges serve as ideal springboards. And he illuminates how to make the most of them. What matters in the end are students' efforts in and out of the classroom, not the name on their diploma. Where you go isn't who you'll be. Americans need to hear that--and this indispensable manifesto says it with eloquence and respect for the real promise of higher education.

The Community College Library Dec 30 2022 Community colleges are a cornerstone of higher education and serve the unique needs of the communities in which they reside. In 2019, community colleges accounted for 41 percent of all undergraduate students in the United States. Community college librarians are engaged in meaningful work designing and delivering library programs and services that meet the needs of their diverse populations and support student learning. The Community College Library series is meant to lift the voices of community college librarians and highlight their creativity, tenacity, and commitment to students. *The Community College Library: Assessment* explores the research, comprehensive plans, and new approaches to assessment being created by community college librarians around the U.S. Chapters include sample activities and materials and cover topics including assessing student learning while shifting from Standards to Framework; investigating and communicating library instruction's relationship to student retention; and building librarian assessment confidence through communities of research practice. This book demonstrates the innovative and replicable ways community college librarians are measuring, evaluating, and reflecting on the services they provide, and how to use these assessments to demonstrate the value and impact of library services and advocate for resources.

Midcourse Correction for the College Classroom Nov 29 2022 This book is about using the Small Group Instructional Diagnosis (SGID) method to make improvements to the educational experience in mid-course. The idea is to use this structured interview process to involve students in helping

faculty improve a course while they are in it, potentially making a difference for themselves as well as for future students. Faculty gain the opportunity to work on a course before it ends, and can see what changes work without waiting for the next time the course is offered, or the end of semester student evaluations. SGID is a consultation method developed to collect mid-semester feedback from students using structured small and large group conversations, involving four conversations between students, a learned colleague the authors refer to as the SGID consultant, and the instructor. First, student talk with each other in small groups about the learning happening in a course, under the guidance of a consultant (SGID Conversation #1- Student & Students). Then the SGID consultant engages the students in a conversation about how the feedback provided impacts the learning in the course (SGID Conversation #2 - Students & Consultant). Then there is a conversation between the consultant and the instructor, where they discuss how the feedback provided by the students can best inform the pedagogical approaches and strategies used by the instructor (SGID Conversation #3 - Consultant & Instructor). Finally, the instructor closes the feedback loop with a conversation with their students about what they learned and how best to move forward (SGID Conversation #4 - Instructor & Students). These conversations during the middle of the semester change the way students think about the teaching and learning endeavor, the way instructors perceive the learning challenges of their courses, and the quality of the institutional academic culture. Most importantly, the SGID equips the instructor with the knowledge to make mid-semester course corrections that can profoundly impact the ways students navigate the course, communicate with the instructor, and realize the ways effective teaching can enhance learning.

Working with Students in Community Colleges Mar 09 2021 This timely volume addresses the urgent need for new strategies and better ways to serve community colleges' present and future students at a time of rapid diversification, not just racially and ethnically, but including such groups as the undocumented, international students, older adult learners and veterans, all of whom come with varied levels of academic and technical skills. The contributing researchers, higher education faculty, college presidents, and community college administrators provide a thorough understanding of student groups who have received scant attention in the higher education literature. They address the often unconscious barriers to access our institutions have erected and describe emerging strategies, frameworks, and pilot projects that can ease students' transition into college and through the maze of the college experience to completion. They offer advice on organizational culture, on defining institutional outcomes, on aligning shifting demographics with the multiple missions of the community college, on strengthening the collaboration of student and academic affairs to leverage their respective roles and resources, and on engaging with the opportunities afforded by technology. Divided into three parts - understanding today's community college campuses; supporting today's community college learners; and specialized populations and communities - this book offers a vision and solutions that should inform the work of faculty, administrators, presidents, and board members. An ACPA Publication

Academic Labor Beyond the College Classroom Dec 18 2021 *Academic Labor beyond the College Classroom* initiates a scholarly and professional conversation, calling upon faculty to participate in, reimagine, and transform their institutional and professional work to look beyond just teaching and research. Chapters in this contributed volume offer case studies, strategies, and exemplars of how faculty can re-engage in institutional service, mentoring, governance, and administrative duties to advance equity efforts at all levels of the university, calling for what Dr. Nancy Chick names in the Foreword as a "scholarship of influence." This book draws from a diverse range of methodologies and disciplines, issuing an invitation to faculty "across the divide" of their specific college, school, or corner of the university into cross-conversations and partnerships for positive change.

Handbook for the College and University Career Center Aug 22 2019 This professional reference provides a comprehensive historical, theoretical, and practical overview of career centers in colleges and universities. The authors trace the evolution of the delivery of college career services and they review various career center models. They provide information and strategies that are necessary for the planning, organization, staffing, funding, and management of a college career center. They review a range of services that may be provided by such centers, including counseling, assessment, computer-based guidance systems, programming, career information, and placement. While the focus of the book is on practicality, the authors consistently demonstrate how theory should guide practice. Included are examples of forms, policies, and strategies that have proven to be effective, along with extensive bibliographies at the end of each chapter.

What Every Parent Needs to Know About College Admissions Mar 29 2020 *The Truth About Career Planning and the College Search Process* "...the go-to guide for students to find the right path, at the right time, for the right tuition amount to lead to their best career outcome." ?Anna Costaras and Gail Liss, authors of *The College Bound Organizer* Society's guiding "truths" about higher education are now incorrect. Making the Grade Jan 27 2020 Based on three years of detailed anthropological observation, this account of undergraduate culture portrays students' academic relations to faculty and administration as one of subjection. With rare intervals in crisis moments, student life has always been dominated by grades and grade point averages. The authors of *Making the Grade* maintain that, though it has taken different forms from time to time, the emphasis on grades has persisted in academic life. From this premise they argue that the social organization giving rise to this emphasis has remained remarkably stable throughout the century. Becker, Geer, and Hughes discuss various aspects of college life and examine the degree of autonomy students have over each facet of their lives. Students negotiate with authorities the conditions of campus political and organizational life--the student government, independent student organizations, and the student newspaper--and preserve substantial areas of autonomous action for themselves. Those same authorities leave them to run such aspects of their private lives as friendships and dating as they wish. But, when it comes to academic matters, students are subject to the decisions of college faculties and administrators. Becker deals with this continuing lack of autonomy in student life in his new introduction. He also examines new phenomena, such as the impact of -grade inflation- and how the world of real adult work has increasingly made professional and technical expertise, in addition to high grades, the necessary condition for success. *Making the Grade* continues to be an unparalleled contribution to the studies of academics, students, and college life. It will be of interest to university administrators, professors, students, and sociologists.

Remaking College Oct 04 2020 Between 1945 and 1990 the United States built the largest and most productive higher education system in world history. Over the last two decades, however, dramatic budget cuts to public academic services and skyrocketing tuition have made college completion more difficult for many. Nevertheless, the democratic promise of education and the global competition for educated workers mean ever growing demand. *Remaking College* considers this changing context, arguing that a growing accountability revolution, the push for greater efficiency and productivity, and the explosion of online learning are changing the character of higher education. Writing from a range of disciplines and professional backgrounds, the contributors each bring a unique perspective to the fate and future of U.S. higher education. By directing their focus to schools doing the lion's share of undergraduate instruction—community colleges, comprehensive public universities, and for-profit institutions—they imagine a future unencumbered by dominant notions of "traditional" students, linear models of achievement, and college as a four-year residential experience. The result is a collection rich with new tools for helping people make more informed decisions about college—for themselves, for their children, and

for American society as a whole.

Trans* in College Oct 28 2022 WINNER of 2017 AERA DIVISION J OUTSTANDING PUBLICATION AWARD This is both a personal book that offers an account of the author's own trans* identity and a deeply engaged study of trans* collegians that reveals the complexities of trans* identities, and how these students navigate the trans* oppression present throughout society and their institutions, create community and resilience, and establish meaning and control in a world that assumes binary genders. This book is addressed as much to trans* students themselves – offering them a frame to understand the genders that mark them as different and to address the feelings brought on by the weight of that difference – as it is to faculty, student affairs professionals, and college administrators, opening up the implications for the classroom and the wider campus. This book not only remedies the paucity of literature on trans* college students, but does so from a perspective of resiliency and agency. Rather than situating trans* students as problems requiring accommodation, this book problematizes the college environment and frames trans* students as resilient individuals capable of participating in supportive communities and kinship networks, and of developing strategies to promote their own success. Z Nicolazzo provides the reader with a nuanced and illuminating review of the literature on gender and sexuality that sheds light on the multiplicity of potential expressions and outward representations of trans* identity as a prelude to the ethnography she conducted with nine trans* collegians that richly documents their interactions with, and responses to, environments ranging from the unwittingly offensive to explicitly antagonistic. The book concludes by giving space to the study's participants to themselves share what they want college faculty, staff, and students to know about their lived experiences. Two appendices respectively provide a glossary of vocabulary and terms to address commonly asked questions, and a description of the study design, offered as guide for others considering working alongside marginalized population in a manner that foregrounds ethics, care, and reciprocity.

The College President Handbook Feb 08 2021 An indispensable manual for the most demanding position in higher education, The College President Handbook supports campus leaders in becoming powerful and effective stewards of their institutions.

The Other College Guide Apr 10 2021 A college degree has never been more important—or more expensive. If you're not made of money, where can you get an amazing liberal arts education without your parents having to remortgage the house or cash in their retirement fund? Which degrees will allow you to fulfill your dreams and earn a decent paycheck? What do you really need to know if you're the first in your family to go to college? How do you find good schools that offer a well-rounded campus life for black or Latino students? From the staff of Washington Monthly comes a new kind of college guide, inspired by and including the magazine's signature alternative college rankings. The Other College Guide features smartly designed, engaging chapters on finding the best-fit schools and the real deal about money, loans, and preparing for the world of work. This essential higher ed handbook also highlights information on what to look for (and watch out for) in online programs and for-profit colleges and concludes with fifty profiles of remarkable but frequently overlooked schools. All things being unequal, The Other College Guide will provide American students—and their families and school counselors—with the honest and practical information they need to make sense of the college process and carve a path to the future they imagine.

Choosing College Jan 07 2021 Cut through the noise and make better college and career choices This book is about addressing the college-choosing problem. The rankings, metrics, analytics, college visits, and advice that we use today to help us make these decisions are out of step with the progress individual students are trying to make. They don't give students and families the information and context they need to make such a high-stakes decision about whether and where to get an education. Choosing College strips away the noise to help you understand why you're going to school. What's driving you? What are you trying to accomplish? Once you know why, the book will help you make better choices. The research in this book illustrates that choosing a school is complicated. By constructing more than 200 mini-documentaries of how students chose different postsecondary educational experiences, the authors explore the motivations for how and why people make the decisions that they do at a much deeper, causal level. By the end, you'll know why you're going and what you're really chasing. The book: Identifies the five different Jobs for which students hire postsecondary education Allows you to see your true options for what's next Offers guidance for how to successfully choose your pathway Illuminates how colleges and entrepreneurs can build better experiences for each Job The authors help readers understand not what job students want out of college, but what "Job" students are hiring college to do for them.
