Given a real number  $x$  with  $0 \leq x \leq 1$  form its binary expansion by taking  $p/2^n$  in Q22 which we may regard as unique by fixing a way of representing those numbers of the form  $q/2^n$  By Q22 this gives a bijection from  $[0, 1]$  to the set of infinite sequences from  $\{0, 1\}$  which is uncountable by Q1 24. Analysis Thus we begin with a rapid review of this theory For more details see e g Hal We then discuss the real numbers from both the axiomatic and constructive point of view Finally we discuss open sets and Borel sets In some sense real analysis is a pearl formed around the grain of sand provided by paradoxical sets.
