Heterocyclic chemistry is the branch of chemistry dealing with the synthesis of Heterocyclic Compounds. An Introduction. In looking at the first of Synthesis I discover the one pot synthesis of benzothiazoles starting from o haloanilide with a tandem thionation with the Lawesson's reagent and an intramolecular cyclization the authors propose as mechanism an intramolecular nucleophilic substitution for me that sounds weird because the best results are obtained. I was looking for a straightforward synthesis of indazole nucleus I found a paper from Abbot lab They have depicted the synthesis of indazole starting from benzaldehyde with fluorine as leaving group and hydrazine we can hope in that case to have formation of the hydrazone and subsequent intramolecular cyclization but the reaction is very.
